ALLAN RONALD IBASCO DONES

has successfully completed the online Specialization

Design of Ventilation & Air conditioning System for Buildings

This course provides essential design techniques and practical applications for HVAC systems, guiding learners through the process of designing HVAC systems for buildings with various applications. It focuses on a practical approach and real-time industry methods, covering fundamental concepts of air-conditioning and refrigeration systems, essential calculations, and standards for efficient air-conditioning and ventilation. Learners will gain knowledge of life safety systems for fire/emergency conditions. Real-time examples include heat load calculations, chiller and condenser piping size calculations, and pump head calculations. Additionally, learners will explore various HVAC equipment, building components, valves, and variable refrigerant flow systems, enhanced by real-time site.
