ALLAN RONALD IBASCO DONES

has successfully completed the online Specialization

Design of Industrial Piping Systems

Industrial Piping Engineering is a science and a specialized discipline of Mechanical Engineering that is seldom covered in any University curriculum. In a typical Chemical or Process Plant, the material cost of piping is around 35% of the initial fixed cost next to the material cost of major equipment (~50%). With this aim, the course content is meticulously designed to cater to the needs of the Process, Oil & Gas, and Chemical Industries. In a nutshell, the course covers the hydraulics of piping systems subjected to both single and two-phase gas & liquid flows, pipe design, flange types & class, valve types & class, pipe stress analysis, pipe supports, cross-country onshore pipeline construction, and ASME B31.1-Power Piping, ASME B31.3-Process Piping.
